

P-50

With the increasing costs of herbicides, fungicides, pesticides, liquid fertilizers, sanitizing agents, etc., why mix a gallon or more of chemicals when a quart or two will do? Why not economize and stop unnecessary chemical waste by using the P-50?

The P-50 hand held sprayer is designed to meet your highest standards in both durability and versatility. Any chemicals sprayed with larger units can be used in the P-50. The P-50 is perfect for plant and animal care uses as well as industrial, institutional, janitorial, theatrical and pest control applications.

A practical, ergonomical design with special quality features such as a precision pumping system with a safety pressure release valve and injection molded components make up the sprayer.

The container once pressurized by 15-20 pumps can spray half of the tanks contents (approx. 24 fl. oz.). A fingertip lever gives a continuous even spray while the fully adjustable nozzle allows a spray pattern ranging from a full jet to a fine mist.

The P-50 is trouble free - keeping equipment in operation is important. All parts are easily replaced when needed.

Important Specifications

Material:

Polypropylene, polyethylene, reinforced polyamid, stainless steel.

VITON O-ring kits available on request.

Working Pressure: **60 psi.**
Tank Capacity: **50 oz.**
Working Capacity: **48 oz.**
