Options:

Adjustable Grasscatcher
Rear Mount, Molded
Multi-Fit Grasscatcher
Rear Mount,
Cotton Canvas/Metal Base

What is REELy changing in American backyards?

It's the way we cut grass. Reel-type push mowers are gaining in popularity because they are lighter, less expensive and safer than the standard rotary power mower. Smaller yards call for practical solutions, consumers want an economical low maintenance lawn mower.

Smaller lawns. Land costs are not decreasing therefore today's homeowner builds on smaller lots. Lack of time forces others to decrease the lawn area of their lots to increase free time.

Maintenance. GMF® reel-type push mowers have self sharpening blades and are practically maintenance free. No major components to replace saves the consumer time and money.

Safety. GMF® reel-type push mowers do not throw stones or other lawn debris. This means that the user and anyone nearby is safer from the hazards of flying debris.

Health and the Environment. With no emissions to pollute the air and no noisy engine, the reel-type push mower user gets exercise and a pollution free environment.

Use and Cut. GMF® reel-type push mowers are lightweight making them easier to push and maneuver. The cutting action of a reel mower is like trimming a lawn with scissors. A reel-type push mower will give your lawn a much healthier cut making it look better.

Storage. GMF® reel-type push mowers take up much less floor space than the conventional rotary mower. Lightweight GMF® mowers can be stored on the wall.
